DSPD 2794 – GROUP 17 JABATAN SAINS KOMPUTER DAN PERKHIDMATAN (JSKP) FILE REPOSITORY SYSTEM

Our Aim?

This project is developed in order to create a secure web-based file repository system that enables efficient file storage, management, and submission for UTM students and lecturers.

Current Issues

- ✗ Students submit assignments through multiple platforms
- ✗ Files are easily misplaced or duplicated
- ✗ Difficult for lecturers to track submissions
- ✗ No centralized storage for academic documents
- ✗ Security concerns when sharing files publicly

Project Scope

Users

- 🎓 Students
- 👩 Lecturers
- 👤 Administrators

Platform

🌐 Web-Based Application

Main Features

- 👤 User Authentication
- ⬆️ File Upload
- ⬇️ File Download
- 🔍 File Search
- 🗂️ Repository Management

Project Objectives

- ✅ To design a centralized academic file repository.
- ✅ To develop secure user authentication and authorization.
- ✅ To implement file upload, download, and management functions.
- ✅ To provide efficient file organization and search features.
- ✅ To test the system functionality and usability.

Our Proposed Solution

The proposed system provides a centralized repository for academic files.

Users can securely upload, organize, and retrieve files through a web interface.

The system improves accessibility, security, and file management efficiency.

Our Methodology (Scrum Development Process)

Planning → Requirement → Analysis → System Design → Development → Testing → Deployment

System Architecture

Front-End

HTML, CSS, JavaScript

Back-End

PHP

Database

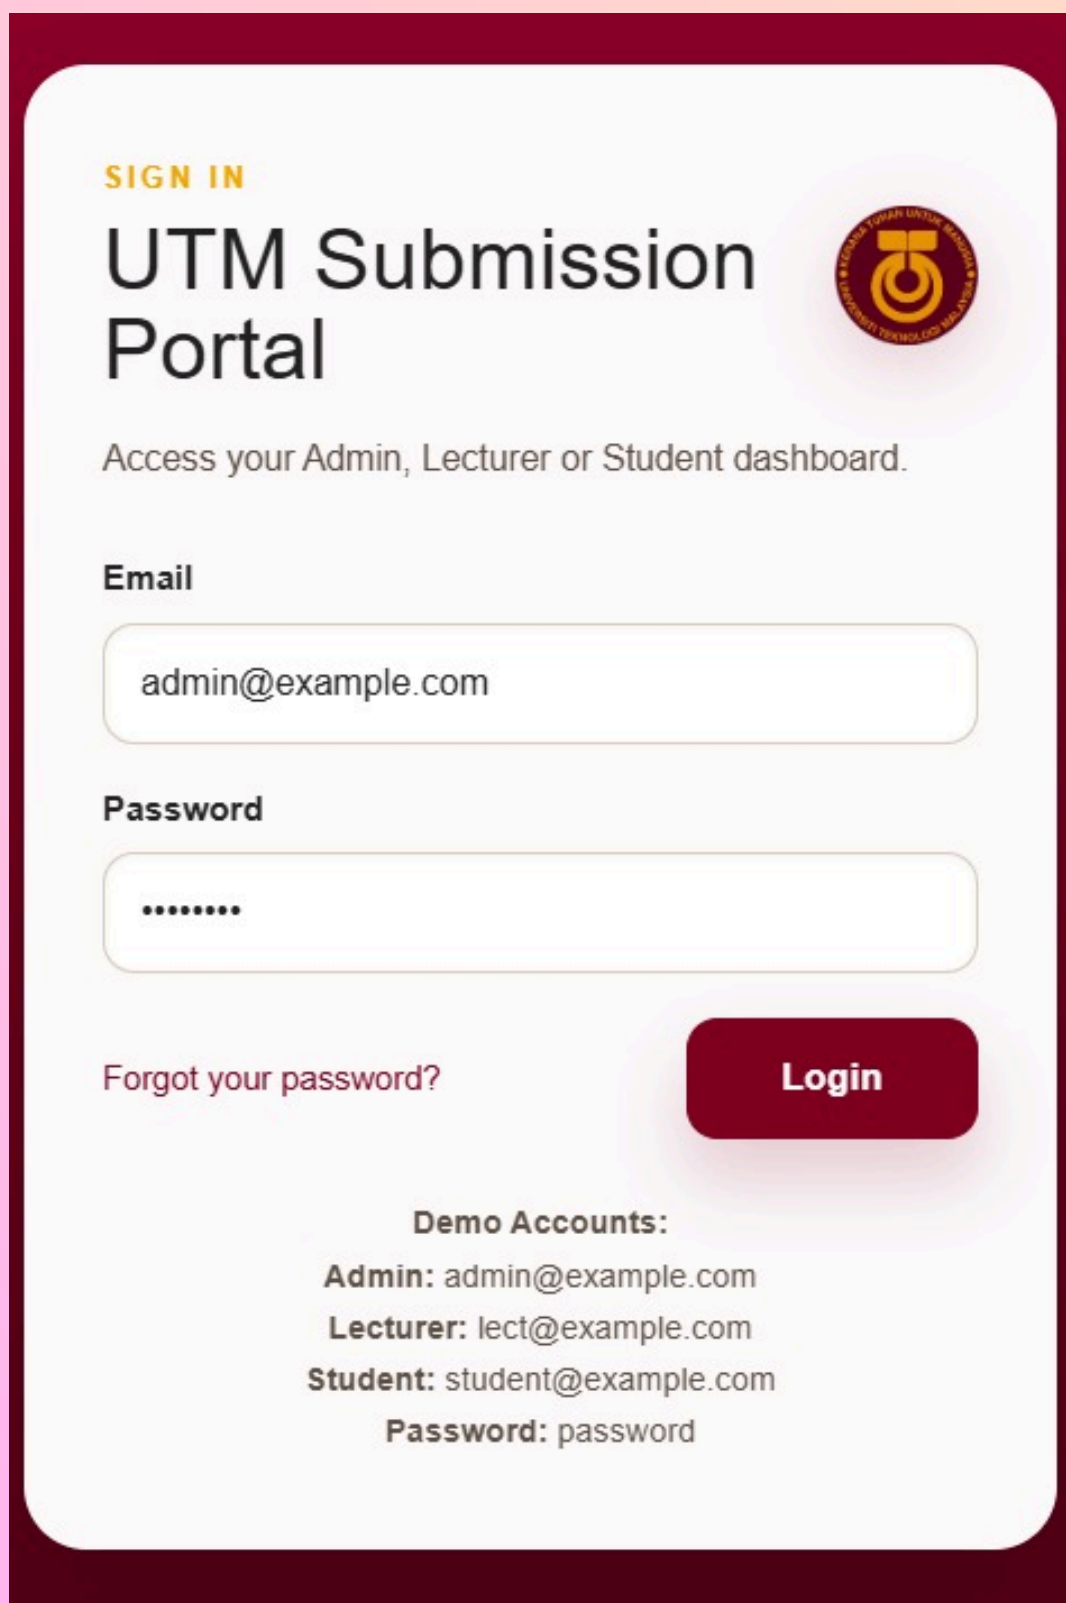

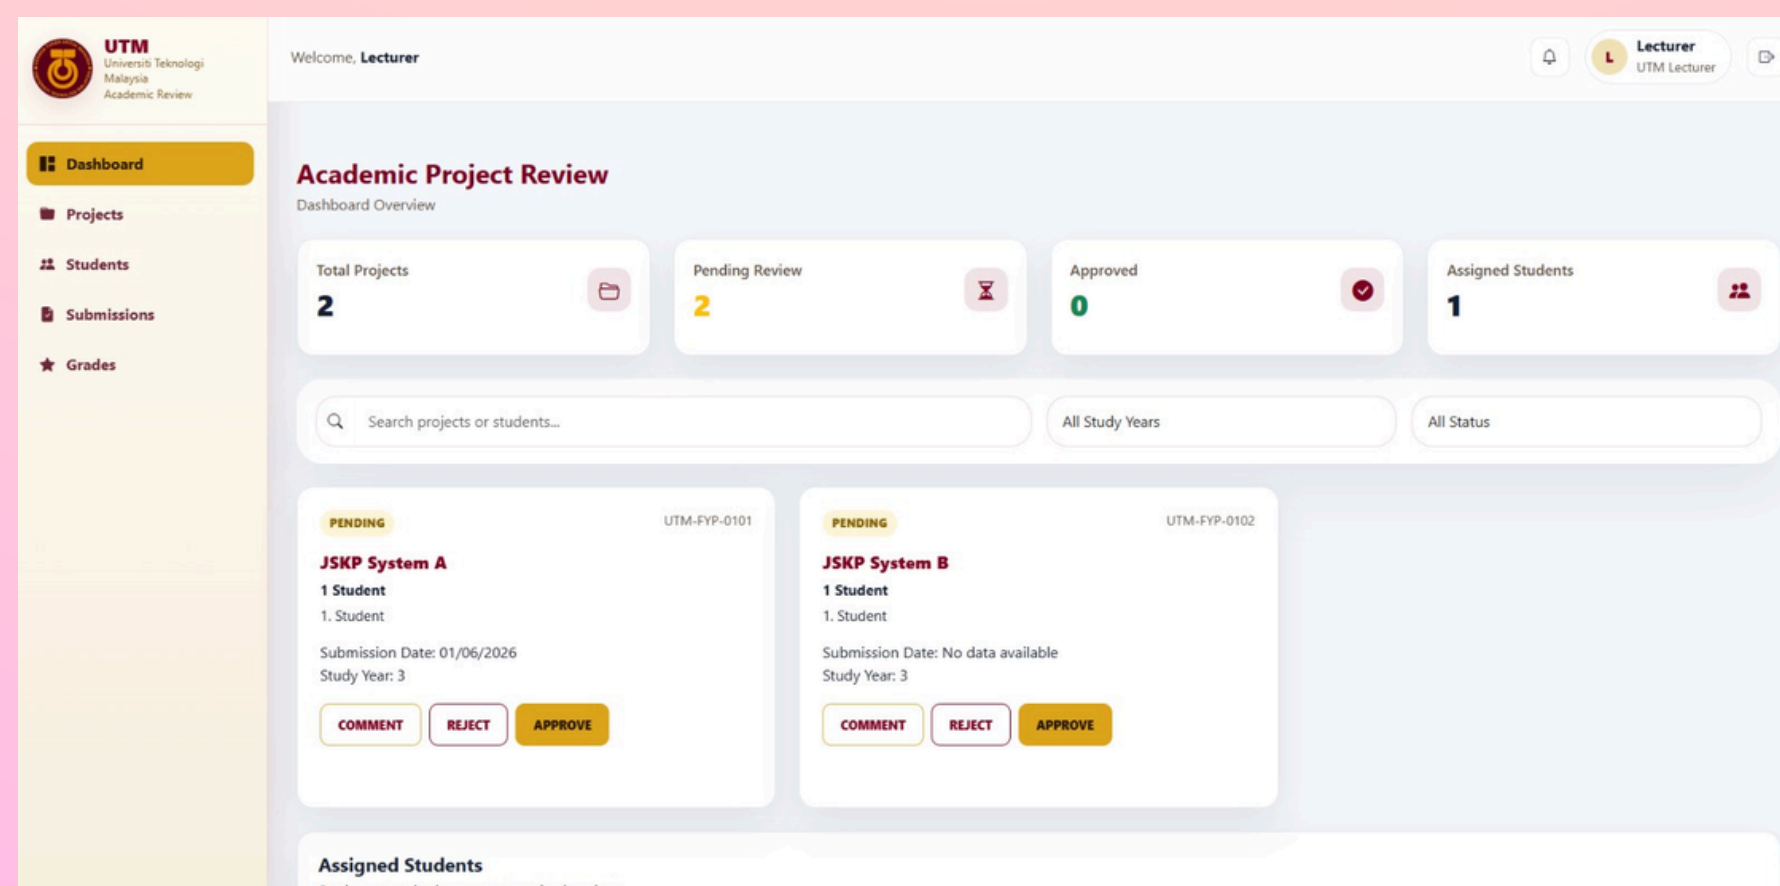

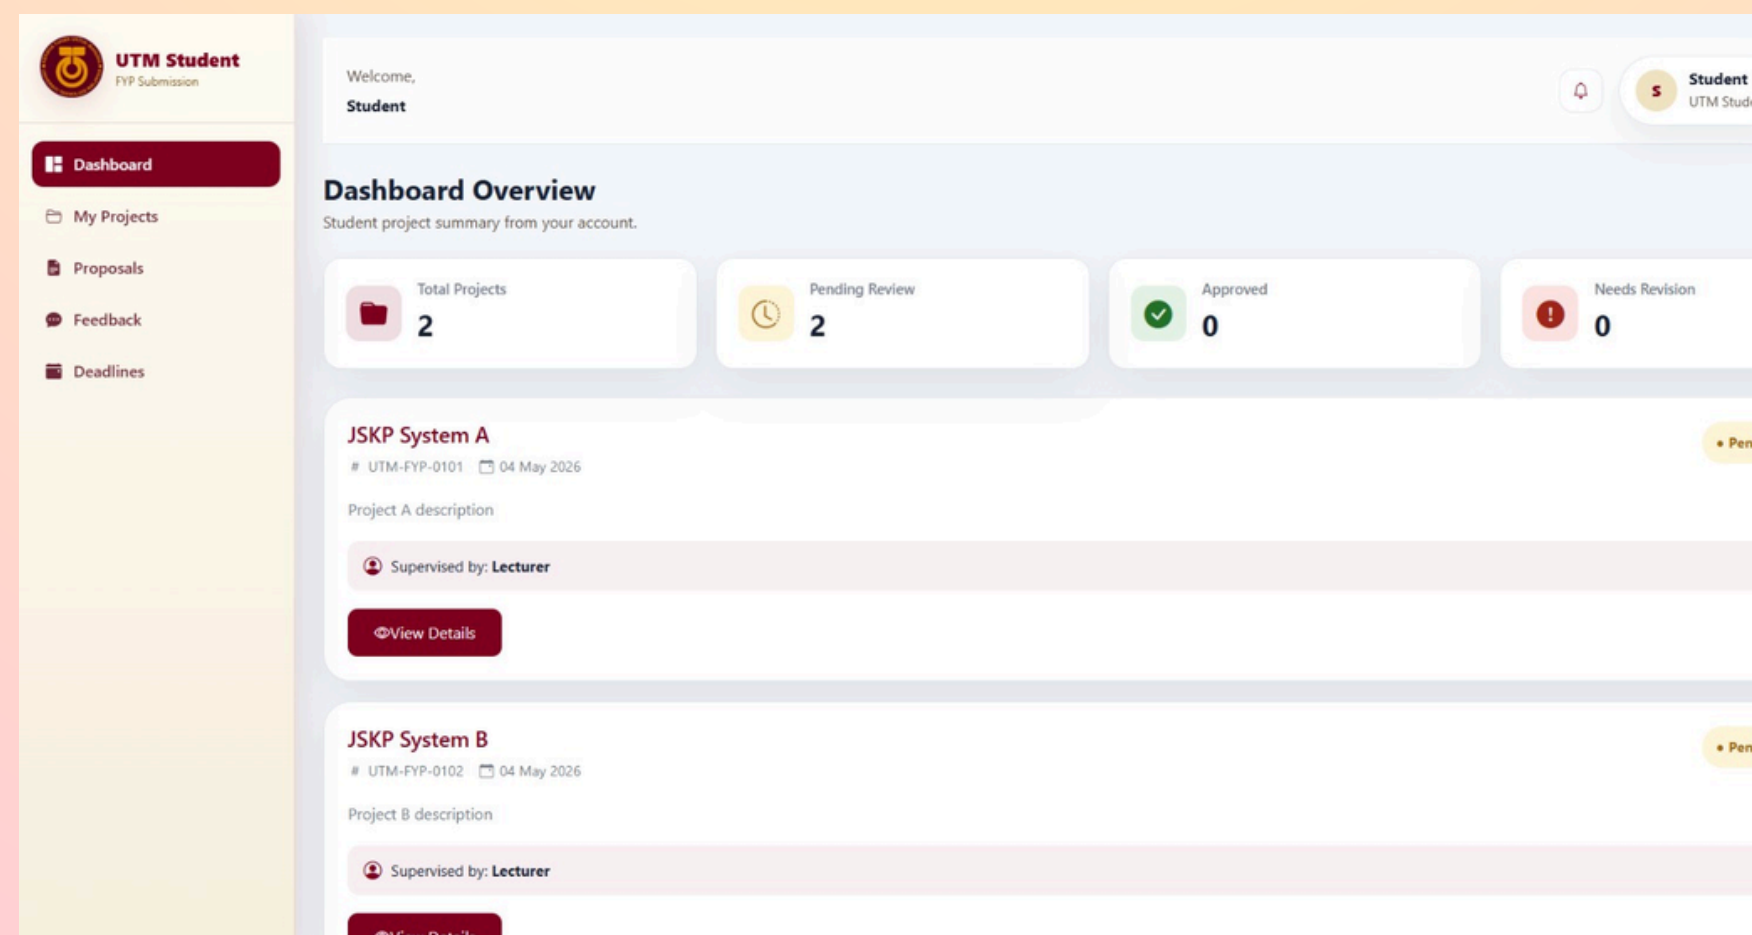

PostgreSQL

Security

HTTPS Protocol

Technology Used

Front-End	HTML, CSS, JavaScript
Back-End	PHP
Database	PostgreSql
Security	HTTPS
Development Tool	Visual Studio Code
Local Server	XAMPP
Version Control	GitHub
